1 SENTENCE

Smarther with Netatmo, the **new connected thermostat** combining the Netatmo technology and the BTicino design, allows you to remotely control the temperature from your smartphone or using voice control.

30 SECONDS

With Smarther with Netatmo, the **new BTicino connected thermostat**, with just a simple touch on the device you activate heating or cooling and change the temperature.

Thanks to the compatibility with **Netatmo smart radiator valves** you can set the desired temperature in every room.

Using the **Home + Control App** and smartphone, you can easily create programs to have a smarter level of home climate management, even when you are away from home. You can also **control Smarther with Netatmo with your voice** through the voice assistants of Google, Amazon and Siri from Apple.

The Smarther with Netatmo connected thermostat is available in **3 colors for flush mounting installation** (black, white and sand) and in white for the **wall mounting installation**.

2 MINUTES

Smarter with Netatmo is the **new connected thermostat** combining the Netatmo technology and the BTicino design.

It works immediately like a normal thermostat even if it is not connected to Wi-Fi: with just a **simple touch** on the device you activate heating or cooling and change the temperature. You can also set the desired temperature and see the temperature and humidity level measured.

Smarter with Netatmo is characterized by the **innovative Boost function**: thanks to this function, you can activate the heating or cooling for a limited time (30, 60 or 90 minutes) to immediately get the **maximum comfort**. This device is a new smart thermostat that allows you to **monitor consumption**, while keeping your heater consumption under control, tracking the temperature (room and set point) and the ON time of the heater. Finally, if you need to be away from home for a few days you can, via the APP, act remotely to adjust the thermostat independent of the automatic programming (**away or antifrost mode**).

The functions can be managed: **manually** on the device; remotely thanks to the new **Home+Control application**, which gives the possibility to set weekly programs; and using voice thanks to the **compatibility with all voice assistants** (Google, Amazon and Siri from Apple). If the Internet connection is temporarily unavailable, Smarter with Netatmo will continue to operate correctly following the set program.

The application is simple, intuitive and can be configured in three simple steps: 1) account creation, 2) then connection of the thermostat to the home Wi-Fi network, 3) access to the wizard in order to create weekly programs. In addition, **the Home + Control app is the same for managing the smart *Livinglight with Netatmo* and *Living Now with Netatmo* electrical systems.**

Thanks to the **compatibility with Netatmo smart radiator valves**, it is possible to update the system for the management of multiple zones. Finally, it's also possible to manage multiple Smarter in the same house or in different homes (e.g. main home and second home).

Smarter with Netatmo is designed to integrate with all living styles thanks to the 3 colors: white, sand and black for **flush mounting installation**. It is also available in white for the **wall mounting installation**.

Designed by BTicino to be **easy to use and install**, Smarter with Netatmo is ideal both in case of new installation or replacement of an old thermostat, just set the 230 Va.c. power supply correctly.
