

WEOZ™, THE NEW INTELLIGENT BUILDING MANAGER

BTicino is proud to announce the launch of WEOZ™, a highly efficient and affordable alternative to traditional BMS, empowering all businesses to improve energy efficiency and occupant well-being. WEOZ™ meets the needs of small and medium spaces such as offices, schools, restaurants and retail shops. It is an intelligent solution fully designed with sustainability, user autonomy and operational efficiency in mind.

A game-changing take on building management

Sustainability has become a major issue for every company. Traditional building management solutions, however, are out of reach for a lot of businesses. Small and medium spaces in particular, cannot face the level of complexity and investments.

The market is in need of a breakthrough solution that will empower building and facility managers, even when working remotely and/or on multi-site operations. WEOZ™ makes it happen.

Intelligence at the heart of the ecosystem

WEOZ™ is an IoT-based solution. The system collects data from every room and transfers it to a network of IoT area managers. The data is accessed and managed remotely through a portal and an app in order to optimise HVAC, lighting and air quality in real time. WEOZ™ brings building management to the next level.

The solution to five key challenges

WEOZ™ installation is quick, simple and non-intrusive, as well as fully scalable according to needs. Once set up, the solution optimises energy efficiency, reduces carbon footprints, and complies with new environmental regulations. It also reduces operational costs and improves occupant well-being.

WEOZ™ meets today's complex challenges with unparalleled simplicity.
