Home + Pro

Discover the new Home + Pro App for installers that simplifies the configuration of smart systems, even offline.

Introduction

BTicino, a leader in electrical systems and building automation, proudly announces the launch of a new mobile application: **Home + Pro**. Specifically designed for electrical installers who create smart home systems with Zigbee technology, this innovative tool allows for the configuration of connected systems even without an Internet connectivity, making every installation faster and more efficient.

Part I: General presentation of the Home + Pro App

Home + Pro was created to meet the concrete needs of the sector, solving a real problem for those working in areas where internet signal coverage is absent. Whether you are in remote environments or situations with limited connections (e.g. on-site), the Home + Pro app will allow you to create and setup smart systems perfectly even offline. Configure smart home systems without any problems and in a safe, fast, and easy manner in contexts where it was previously unthinkable. Thanks to its intuitive interface, installers can manage configurations seamlessly, optimizing work time and improving the quality of service offered to customers. The app will be compatible with the new gateways of all BTicino "with Netatmo" wiring devices. Within the BTicino Smart Home application ecosystem, Home + Pro represents a valuable additional alternative for configuring systems that use Zigbee technology. This application offers a supplementary configuration option compared to Home + Control, the app currently dedicated to system setup, which remains a valuable tool for the installer. Furthermore, the configuration created with Home + Pro can be easily transferred to the end customer via Home + Control. With Home + Control, the end user can control and manage lights, shutters, heating, appliances, and high-energy consumption devices directly from their smartphone. This allows for constant monitoring of household energy consumption without compromising comfort, promoting energy savings.

Part II: Distinctive features

1. Offline Configuration:

- installers can set up systems even without an internet connection, avoiding delays and wasted time

Home + Pro

2. Easy and fast:

- it reduces configuration times wherever you are, ensuring maximum efficiency and an unparalleled customer experience

3. Intuitive Interface:

- the app's ease of use does not change the installer's habits but significantly improves the configuration experience on-site

4. Compatibility with BTicino ecosystem:

- Home + Pro completes the BTicino ecosystem of applications for smart home control, seamlessly integrating with other apps from the brand.

It is compatible with all connected systems equipped with the new Zigbee gateways from the BTicino wiring devices, offering installers a versatile and scalable solution for any type of installation. However, i

Home + Pro completes the BTicino app ecosystem, which also includes Home + Control for home comfort command and Home + Security for home security management. This integration allows for comprehensive and coordinated management of systems, offering end customers a unique and personalized experience.

Availability:

The new Home + Pro app is now available for free download on the Apple App Store and Google Play Store.
